Art Unit: 1644

DETAILED ACTION

1. Applicant's preliminary amendment received December 8, 2003 is acknowledged.

Claims 3 and 9 have been cancelled.

Claims 1, 2, 4-8, and 10-18 are pending in the instant application.

Election/Restrictions

- 2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 2, 4-8, and 10-12, drawn to a method of screening for compounds that reduce bone deterioration, classified in class 435, subclass 7.1.
 - II. Claims 13-18, drawn to a method of screening for compounds that increase bone mineral density, classified in class 435, subclass 7.21.

The inventions are distinct, each from the other because of the following reasons:

3. The inventions of Groups I and II are different methods. As such they require unique ingredients, contain unique process steps, and achieve distinct goals.Specifically, a method that screens for compounds that reduce bone deterioration by Application/Control Number: 10/730,751 Page 3

Art Unit: 1644

selecting compounds that reduce the apoptosis of osteoblasts and osteocytes would not necessarily identify the same compounds a method that selects for compounds that increase bone mineral density since a decrease in the number of dying cells would not necessarily indicate that density was increasing but might rather indicate that bone density remained stable. As such these methods are patentably distinct.

- 4. Because these inventions are distinct for the reasons given above, because the literature searches required for Groups I-II are not coextensive in that art that anticipates or renders obvious the invention of any one group would not necessarily anticipate or render obvious the inventions of the other group, and because Groups I-II have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.
- 5. This application contains claims directed to the following patentably distinct species of the claimed invention of Groups I and II. The species are the nature of the assay used in the claimed methods of screening. Applicant is required to elect *in vitro* or *in vivo* as the screening method for use in the claimed method. These species are distinct because they require different reagents, method steps, and because the results of *in vitro* and *in vivo* experiments are not always comparable.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is

finally held to be allowable. Currently, claims 1, 2, 4, 7, 8, and 10 of Group I and claims 13-18 of Group II are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/730,751 Page 5

Art Unit: 1644

7. Applicant is reminded that upon the cancellation of claims to a non-elected

invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by

a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Michael Szperka whose telephone number is 571-272-

2934. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Christina Chan can be reached on 571-272-0841. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
